

IT Consulting

“Congruent employees are professionals and work in a team environment. I always knew that Congruent employees were equally passionate and dedicated to making the project successful as my internal team members.

I have been impressed overall with the skills and experiences that Congruent employees bring to the table. They are pretty quick to learn the new business and technologies.

Congruent strives to forge a relationship with its customer base unlike [others].”

Bobby Kishore
General Manager
Microsoft Corporation

Congruent

The Single Source For Your Business Technology Needs

Recruiting The Best With Your Success In Mind

The technological issues encountered by a business often come up unexpectedly and in areas that the current IT department may be ill equipped to remedy in a timely manner. Congruent knows that these issues need to be dealt with immediately. We aggressively recruit highly skilled consultants that can quickly join your team, understand your issues and consistently deliver quality results.

Whether your business requires on-site consultants who integrate into your current IT team, or off-site experts to complete a development project, Congruent provides qualified professionals that deliver superior IT solutions. By the time the consultant first meets with your company’s hiring manager, we have already determined their skills fit your requirements, ensuring you quicker hiring times and faster project delivery.

Congruent’s IT Consulting Services provide each client with consultants who have:

Proven technical knowledge—Congruent aggressively screens each candidate to ensure that they have the required skills and experience to benefit our clients.

Comprehensive cross-platform and cross-technology skills—Congruent actively searches for candidates with expertise working within multiple platforms, software and hardware environments and industries.

Microsoft certifications—Congruent makes education top priority by finding candidates who have pursued certifications with Microsoft in development, systems administration and database administration.

We actively recruit a pool of candidates whose skills span job competencies and technologies:
